## Abstract

A filter adaptation unit suitable for producing a set filter coefficients is provided including an error characterization unit for characterizing the error in a filter's impulse the response, where set filter coefficients determining the impulse response are derived using a least squares method. The error characterization unit generates a set of error characterization data elements associated to a newly generated set of filter coefficients. The set of error characterization data elements is generated on the basis of a first input signal and a noise signal. The first signal and the noise signal are first broken down into frequency bands. A computation for statistically characterizing the error is then applied to each frequency band, yielding an error characterization data element per frequency band. A selection unit then selects one of the newly generated set of filter coefficients and an existing set of filter coefficients at least in part on the basis of their respective sets of error characterization data elements. The selected set of filter coefficients is then released in a format suitable for use by an adaptive filter.
